Applicant : Raymond W. Zeng et al.   Attorney's Docket No.: 10559-524001
Serial No. : 10/056,657   Intel Corporation Docket No.: P12428
Filed   : October 19, 2001
Page   : 2 of 11

IN THE SPECIFICATION:

Please amend the paragraph beginning at page 2, line 21 as follows:

For multifunctional pump system 10 to function properly, the system provides multiple

outputs and multiple voltage levels to satisfy requirements of an external circuit (not shown).

For example, when multifunctional pump 20 is in the program mode, multifunctional pump 20

slews from a read level voltage (e.g., 5 volts (V)) to a program level voltage (e.g., 7 V) and back

down to a verify level voltage (e.g., 5 V); and system 10 provides an output corresponding to

these voltage changes.   Another output is required from system 10 that provides a constant

voltage (e.g., 5 V).   Thus, systemSystem 10 provides both a square-wave variable voltage level

signal and a constant voltage.
